SAS® Intelligent Decisioning

Decisions are a combination of rule sets, analytical models, conditional logic, custom code, and other objects which are used to evaluate data and make real-world business decisions based on SAS decision output.

Should a mortgage loan be approved?

Is a transaction fraudulent?

Is a machine about to fail?

Is a medical claim valid?

Which offer should be sent to a customer?

Decisions are a combination of rule sets, analytical models, conditional logic, custom code, and other objects which are used to evaluate data and make real-world business decisions based on SAS decision output.

A business may use SAS Intelligent Decisioning to answer questions like:

- Should a mortgage loan be approved?
- Is a transaction fraudulent?
- Is a machine about to fail?
- Is a medical claim valid?
- Which offer should be sent to a customer?

Loan Request Decision Flow

The demo in this session creates the Loan Request decision flow depicted on this slide. This decision flow uses several different objects such as a Variable assignment, SAS Model, Assignment Rulesets, a Yes/No Branch, a Data Query to an Oracle database, Python code, and a Segmentation tree.
